DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 32-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Sano et al. (JP 2000-332296).
3. In reference to claim 32, Sano et al. (JP 2000-332296, hereinafter referred to as the "Sano" reference) discloses a structure which meets the claim. Figures 2 and 4 of Sano each discloses a p-type group II-VI oxide semiconductor (zinc oxide: 101a-101z, 201a-201z) with a localized band formation element (103a-103z, 203a-203z) that is isovalent with at least one of the other elements and has a smaller electronegativity than at least one element.
4. With regard to claim 33, Sano (JP 2000-332296) discloses a structure which meets the claim. Figures 2 and 4 of Sano each discloses a p-type group II-VI oxide semiconductor (101a-101z, 201a-201z) with at least one group II element including zinc and at least one group VI element in the form of oxygen. There is a localized band formation element (103a-103z, 203a-203z) which is isovalent with at least one of the other elements and also has a smaller electronegativity than at least one element.

5. In reference to claim 34, Sano (JP 2000-332296) discloses a material which meets the claim. Sano discloses a p-type group II-VI oxide semiconductor with a localized band formation element (103a-103z, 203a-203z), in the form of tellurium (column 3, lines 25-44), which is isovalent with one of the elements of the p-type semiconductor. The localized band formation element (103a-103z, 203a-203z), in the form of tellurium, has a smaller electronegativity than at least one element of the p-type semiconductor. There is an acceptor element (nitrogen) which has fewer valence electrons than at least one of the other elements in the p-type semiconductor (paragraph 15).

6. In reference to claim 35, Sano et al. (JP 2000-332296) discloses a structure which meets the claim. Figures 2 and 4 of Sano each discloses a p-type group II-VI oxide semiconductor (zinc oxide: 101a-101z, 201a-201z) with a localized band formation element (103a-103z, 203a-203z), in the form of tellurium, that is isovalent with at least one of the other elements and has a smaller electronegativity than at least one element.

Allowable Subject Matter

7. Claims 9-17, 22, 28, and 36 were allowed in previous Office action.
8. The following is a statement of reasons for the indication of allowable subject matter: the reasons for allowance were cited in a previous Office action.

Conclusion

9. Applicant's submission of an information disclosure statement under 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p) on October 1, 2008 prompted the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 609.04(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
